

I am

*a sixty-years old man with health issues like tremor,rigid muscles.*

I'm trying to

*identify the main cause for these symptoms*

But

*due to lack of proper treatment I am unable to diagnose the health issue*

Because

*the diagnosis procedures are expensive and time consuming*

Which makes me feel

*leading a painful and meaningless life*

I am

*a forty-years old woman with parkinson disease.*

I'm trying to

*find a proper treatment to cure this disease*

But

*this disease is incurable but still it can be controlled if it is diagnosed earlier.*

Because

*proper medication for this disease is not yet available for everyone.*

Which makes me feel

*afraid of death*
